Office Action Summary

Application No.

10/799,017

Applicant(s)

CHANG ET AL.

Examiner

Michael P. Ferguson

Art Unit

3679

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 11 November 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 and 7-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Marola (US 2,897,022).

As to claim 1, Marola discloses a coupling structure capable of serially connecting two motors, comprising:

two bearing sleeves **13** each formed with a groove and capable of being respectively disposed in two motors;

a connector **7** having a first end and an opposed second end, the first end and the second end each formed with a groove;

a first elastic fastener **20** fit into the groove of the connector at the first end and received in the groove formed on one of the two bearing sleeve; and

a second elastic fastener **20** fit into the groove of the connector at the second end and received in the groove formed on the other bearing sleeve (Figures 1 and 2).

As to claim 2, Marola discloses a coupling structure wherein the grooves formed on the bearing sleeves **13** and the connector are ring-shaped (Figure 2).

As to claim 3, Marola discloses a coupling structure wherein the first and the second elastic fasteners **20** are ring-shaped (Figure 2).

Art Unit: 3679

As to claim 4, Marola discloses a coupling structure wherein the first and the second elastic fasteners **20** are C-shaped retaining rings (Figure 2).

As to claim 5, Marola discloses a coupling structure wherein the material of the bearing sleeves **13** is selected from the group consisting of metal (cross-hatching; Figure 2) and engineering plastic.

As to claim 7, Marola discloses a coupling structure wherein the connector **7** is formed with a leading edge to create a guiding surface between the grooves (Figure 3).

As to claim 8, Marola discloses a coupling structure wherein the guiding surface is an inclined surface (Figure 3).

As to claim 9, Marola discloses a coupling structure capable of serially connecting two motors, comprising:

two bearing sleeves **13** each formed with a groove on its inner surface and capable of being respectively disposed in two motors;

a connector **7** having a first end and an opposed second end, the first end and the second end each formed with a groove; and

two ring-shaped elastic fasteners **20**, each of which has an inner edge fit into the groove formed on the connector and an outer edge received in the groove formed on the bearing sleeves (Figures 1 and 2).

As to claim 10, Marola discloses a coupling structure wherein the grooves formed on the bearing sleeves **13** and the connector **7** are ring-shaped (Figure 2).

As to claim 11, Marola discloses a coupling structure wherein the material of the bearing sleeves **13** is selected from the group consisting of metal (cross-hatching; Figure 2) and engineering plastic.

As to claim 12, Marola discloses a coupling structure wherein the connector **7** is formed with a leading edge to create an guiding surface between the grooves (Figure 3).

As to claim 13, Marola discloses a coupling structure wherein the guiding surface is an inclined surface (Figure 3).

As to claim 14, Marola discloses a coupling structure capable of serially connecting two motors, comprising:

a first bearing sleeve **13** having one end formed with a connection part **7**, the connection part being formed with a groove in its outer surface, and the first bearing sleeve capable of being disposed in one of two motors;

a second bearing sleeve **13** formed with a groove on its inner surface and capable of being disposed in the other of two motors; and

a ring-shaped elastic fastener **20** having an inner edge fit into the groove formed on the connection part of the first bearing sleeve and an outer edge received in the groove formed on the second bearing sleeve (Figures 1 and 2).

As to claim 15, Marola discloses a coupling structure wherein the connection part **7** is formed with a leading edge to create an inclined guiding surface (Figure 3).

As to claim 16, Marola discloses a coupling structure wherein the grooves formed on the bearing sleeves **13** and the connection **7** part are ring-shaped (Figure 2).

As to claim 17, Marola discloses a coupling structure wherein the ring-shaped elastic fastener **20** is a C-shaped retaining ring (Figure 2).

As to claim 18, Marola discloses a coupling structure wherein the first and second bearing sleeve **13** are made of metal (cross-hatching; Figure 2).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marola.

As to claim 6, Marola fails to disclose a coupling structure wherein the bearing sleeves are copper sleeves.

The applicant is reminded that the selection of a known material based upon its suitability for the intended use is a design consideration within the skill of the art. In re Leshin, 227 F.2d 197, 125 USPQ 416 (CCPA 1960). Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify a coupling structure as disclosed by Marola wherein the bearing sleeves are copper as such material is a well-known, widely used and commercially available material within the art.

As to claim 19, Marola fails to disclose a coupling structure wherein the first and second bearing sleeve are copper sleeves.

Art Unit: 3679

The applicant is reminded that the selection of a known material based upon its suitability for the intended use is a design consideration within the skill of the art. In re Leshin, 227 F.2d 197, 125 USPQ 416 (CCPA 1960). Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify a coupling structure as disclosed by Marola wherein the bearing sleeves are copper as such material is a well-known, widely used and commercially available material within the art.

As to claim 20, Marola fails to disclose a coupling structure wherein the first and second bearing sleeve are made of engineering plastics.

The applicant is reminded that the selection of a known material based upon its suitability for the intended use is a design consideration within the skill of the art. In re Leshin, 227 F.2d 197, 125 USPQ 416 (CCPA 1960). Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify a coupling structure as disclosed by Marola wherein the bearing sleeves are engineering plastic as such material is a well-known, widely used and commercially available material within the art.

Response to Arguments

5. Applicant's arguments filed November 11, 2005 have been fully considered but they are not persuasive.

As to claims 1 and 9, Attorney argues that:

Marola As to claim 1, Marola does not disclose a coupling structure *for serially*

Art Unit: 3679

connecting two motors, comprising two bearing sleeves each formed with a groove and respectively disposed in two motors.

Examiner disagrees. As to claim 1, Marola discloses a coupling structure capable of serially connecting two motors, comprising two bearing sleeves **13** each formed with a groove and capable of being respectively disposed in two motors (Figure 1).

As to claim 14, Attorney argues that:

Marola does not disclose a coupling structure *for serially connecting two motors*, comprising a first bearing sleeve having one end formed with a connection part, the connection part being formed with a groove in its outer surface, *and the first bearing sleeve is disposed in one of two motors*; and a second bearing sleeve formed with a groove on its inner surface *and disposed in the other of two motors*.

Examiner disagrees. As to claim 14, Marola discloses a coupling structure capable of serially connecting two motors, comprising a first bearing sleeve **13** having one end formed with a connection part **7**, the connection part being formed with a groove in its outer surface, and the first bearing sleeve capable of being disposed in one of two motors; and a second bearing sleeve **13** formed with a groove on its inner surface and capable of being disposed in the other of two motors (Figure 1).

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael P. Ferguson whose telephone number is (571)272-7081. The examiner can normally be reached on M-F (8:00-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel P. Stodola can be reached on (571)272-7087. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
